

Savannah

National Wildlife Refuge

American alligators, Kirk Rogers

Savannah NWR, one of seven refuges administered under the Savannah Coastal Refuges Complex, was established April 6, 1927. It consists of 31,551 acres located along the lower Savannah River; 6,000 acres of freshwater impoundments are managed for migratory waterfowl and were formerly the rice fields of plantations dating back to the mid to late 1700's.

Habitats of Savannah NWR include freshwater marshes, tidal rivers and creeks, bottomland hardwoods, and upland hardwood forests.

The refuge is home to a large variety of wildlife including waterfowl, wading birds, shorebirds, songbirds, American alligators, and several endangered/threatened species including woods storks, manatees, and shortnose sturgeon.
